

10-Day Project Timeline – Release Quality Analytics Platform

Day 1 – Project Planning & Database Design

Designed project architecture, business requirements, ER diagram, SQLite database and sample data.

Day 2 – SQL Development

Business SQL queries using SELECT, JOIN, GROUP BY, CASE and Aggregate Functions.

Day 3 – Advanced SQL

Views, CTE (WITH), Window Functions and SQL CSV outputs.

Day 4 – Python Analytics

Processed SQL outputs with Python/Pandas and generated CSV datasets.

Day 5 – Power BI Data Modeling

Imported data, transformed datasets and configured relationships.

Day 6 – DAX Development

Created Bug Closure Rate, Open Bugs, Critical Bugs, Active Releases and Test Pass Rate measures.

Day 7 – Dashboard Development

Built KPI cards, tester performance, release and bug analytics dashboards.

Day 8 – SQL Analytics Dashboard

Created dedicated SQL reporting page and business visuals.

Day 9 – Documentation

Organized documentation, screenshots and folder structure.

Day 10 – Final Review

Completed README, reviewed project and prepared GitHub portfolio.

Technologies

SQLite • SQL • Python • Pandas • Power BI • DAX • Git • GitHub

Skills Demonstrated

SQL Analytics, Data Modeling, Python Data Processing, Business Intelligence, Dashboard Design, KPI Development, Data Visualization, Business Reporting, End-to-End Analytics.
