

8-Week Technical Portfolio Roadmap

Prepared for Zehra Güler

Objective: Build a portfolio aligned with QA Automation, Business Analysis and Product Owner roles while strengthening SQL, Python and Power BI skills.

Week 1 - SQL Foundations

- Install SQLite + DB Browser for SQLite
- Learn SELECT, WHERE, ORDER BY, LIMIT
- Practice GROUP BY, HAVING
- Learn INNER/LEFT JOIN
- Solve 25 SQL exercises

Week 2 - Database Design

- Create Release Quality database
- Tables: Projects, Releases, TestCases, Bugs
- Insert sample data
- Write 20 business queries

Week 3 - Python + SQL

- Learn sqlite3
- Read SQL results with pandas
- Export CSV
- Create reusable functions

Week 4 - Data Visualization

- Learn matplotlib
- Create KPI charts
- Bug trend
- Release success rate

Week 5 - Power BI

- Import SQLite/CSV
- Cards
- Bar charts
- Line charts
- Slicers
- Dashboard design

Week 6 - GitHub

- Professional README
- Screenshots
- Folder structure
- Meaningful commits
- Documentation

Week 7 - SQL Server

- Install SQL Server Express/Developer
- Learn Views
- Stored Procedures
- Indexes
- Repeat project on SQL Server

Week 8 - Automation

- Build Playwright Python Framework
- Smoke suite
- Regression suite
- GitHub Actions CI
- Final portfolio review

Final GitHub Portfolio

- Release Quality Analytics Dashboard (SQL + Python + Power BI)
- SQL Business Queries Collection
- Python Algorithm Practice Repository
- Playwright Automation Framework
- API Test Automation

Interview Story

Explain how the project simulates a real enterprise QA environment: release metrics, bug tracking, quality KPIs, SQL analytics, Python reporting and Power BI visualization. Relate every feature to your Mercedes-Benz experience.
